Software Development Manager

With 6 years of experience in software development, I excel in leading teams to architect and implement efficient, scalable, and secure solutions. Spearheading a cross-functional team, I optimize the full software development lifecycle, utilizing modern tech stacks like Laravel, Django, and Vue.js. My expertise lies in designing and maintaining critical applications, and I excel in mentoring and leading teams to foster a culture of innovation and continuous improvement.

WORK EXPERIENCE

MK Themed Attractions Philippines Software Development Manager

08/2024 – Present

- Lead the Software Development Department responsible for designing, developing, and maintaining critical applications that support the daily operations of the entire company.
- Oversee the full software development lifecycle, ensuring high performance, scalability, and reliability across internal systems.
- Utilize a modern tech stack including Laravel, Django, FastAPI, and Vue.js to deliver efficient, maintainable, and secure solutions.
- Architect and implement a microservices-based infrastructure, leveraging AWS Lambda to minimize server downtime and efficiently scale with the growing number of users.
- Define technical strategies, manage development roadmaps, and align software initiatives with business goals.
- Mentor and lead a cross-functional team of developers, fostering a culture of innovation, accountability, and continuous improvement.
- Coordinate with other departments to identify pain points and deliver custom software solutions tailored to operational needs.

Temarotech Software Developer

01/2024 – 08/2024

- Develop and maintain Web Applications and Progressive Web Applications (PWA) using Vue 3 and Laravel as the core technology stack.
- Build feature-rich PWAs that behave like native mobile apps, including offline capabilities and installability across devices.
- Collaborate closely with product managers, designers, and fellow developers to ensure performance, usability, and scalability of applications.

GoCloud Inc. Web Developer

05/2019 – 01/2024

- Design, develop, and maintain scalable web applications primarily using PHP (Laravel) and Python (Django) frameworks.
- Oversee the development of corresponding mobile applications using Ionic-Angular, ensuring feature parity and seamless user experience across platforms.
- Lead technical decision-making, code reviews, and architectural planning to ensure high performance, maintainability, and security of applications.
- Collaborate with cross-functional teams including UI/UX designers, backend engineers, and QA testers to deliver robust and reliable software products.
- Mentor junior developers and manage development workflows, ensuring timely and efficient delivery of project milestones.
