PROFESSIONAL SUMMARY

Results-driven Software Development Manager with 7+ years of experience in full-stack and backend engineering, specialising in Python (FastAPI, Django), PHP (Laravel), cloud infrastructure (AWS Serverless), and Generative AI integration using Retrieval-Augmented Generation (RAG). Proven track record of leading cross-functional engineering teams, modernising legacy monolithic systems into scalable microservices, and delivering AI-powered automation that reduces manual workloads by up to 70%. Adept in Agile delivery, stakeholder management, system design, and mentoring engineers to produce production-ready solutions.

PROFESSIONAL EXPERIENCE

Software Development Manager

MK Themed Attractions Philippines | December 2024 – Present | Angeles, Pampanga

- Led cross-functional software engineering team (2 Frontend, 2 Backend Developers, 1 QA Engineer) using Agile/Scrum delivery methodology.
- Directed modernisation of legacy monolithic systems into distributed microservices using FastAPI (Python) and Laravel (PHP), improving scalability and maintainability.
- Architected an internal GenAI RAG pipeline using FastAPI and MongoDB Vector Search to automate complex factory data analysis and material consumption auditing.
- Designed AI-powered agents to automate e-commerce client onboarding and follow-up workflows, reducing manual customer service workload by ~70%.
- Spearheaded AWS Serverless cloud modernisation initiative using Bref, migrating a legacy on-premise application supporting ~300 concurrent users, reducing infrastructure costs to ~USD 30/month.
- Implemented CI/CD-friendly serverless deployment patterns that eliminated server maintenance overhead and minimised operational downtime.
- Aligned technical roadmaps with business objectives through stakeholder management and mentored engineers via architectural reviews and technical guidance.

API and Automation Specialist

MK Themed Attractions Philippines | August 2024 – December 2024 | Angeles, Pampanga

- Designed and developed automation solutions integrating multiple platforms into a centralised SaaS ecosystem managing daily company operations.
- Built scalable RESTful API integrations to streamline sales and operational workflows, reducing manual intervention across business processes.
- Delivered integration services using REST API design principles to improve cross-platform data consistency.

Software Developer

Temarotech | January 2024 – August 2024 | Makati, Philippines

- Developed and maintained business web applications using Laravel (PHP) and backend logic.
- Built interactive front-end UIs using Vue.js, JavaScript, and jQuery.
- Collaborated with the team to debug legacy codebases and maintain stability of core database operations (MySQL, PostgreSQL).

Lead Web Developer

GO CLOUD Inc. | May 2019 – January 2024 | San Fernando, Pampanga

- Led Agile engineering team of backend and frontend developers to design, build, and deploy high-performance enterprise web applications including e-commerce platforms, school management systems, and hospital information systems.
- Architected scalable backend microservices using Python and PHP, improving system uptime and reducing API response latency across core business modules.
- Guided AWS cloud infrastructure deployment, ensuring environment stability, secure data migrations, and cost-effective resource allocation.
- Mentored junior and mid-level developers through code reviews, technical workshops, and pair programming sessions.
- Served as the primary technical liaison between stakeholders and the development team, translating complex business requirements into production-ready solutions.

SELECTED PROJECTS

GenAI Factory Audit Platform

- Designed and implemented a RAG pipeline using FastAPI and MongoDB Vector Search.
- Automated factory data analysis and material consumption auditing, eliminating manual reporting.

AI Customer Onboarding Agent

- Built AI agents automating e-commerce client follow-up and account onboarding workflows.
- Reduced manual customer service workload by approximately 70%, improving team productivity.

AWS Serverless Modernisation Initiative

- Migrated a legacy on-premise application (~300 concurrent users) to AWS Serverless using Bref.
- Improved scalability, accessibility, and operational efficiency while maintaining ~USD 30/month infrastructure costs.

TECHNICAL SKILLS

Leadership & Management

Team Leadership, Stakeholder Management, Agile, Scrum, Technical Mentorship, Cross-functional Collaboration, Code Review

Generative AI & Machine Learning

Retrieval-Augmented Generation (RAG), AI Agents, Prompt Engineering, MongoDB Vector Search, LLM Integration

Backend Development

Python, PHP, JavaScript, FastAPI, Django, Laravel, REST APIs, Microservices, Vue.js, jQuery

Cloud & DevOps

AWS, AWS Serverless, Bref, AWS Well-Architected Framework, CI/CD, Cloud Infrastructure, Serverless Architecture

Databases

MongoDB, PostgreSQL, MySQL

Architecture & Engineering

Microservices, Distributed Systems, System Design, API Integration, Data Structures & Algorithms, Software Architecture

EDUCATION

Bachelor of Science in Information Systems

La Verdad Christian College, Apalit, Pampanga

2015 – 2019

CERTIFICATIONS

AWS Well-Architected Proficient
